

Department of Radiation Medicine

Research Opportunity in Quality of Life (QOL) Investigation

Goals of ongoing study: To investigate the role of depression, anxiety, and QOL prior to radiotherapy in QOL and treatment satisfaction post-treatment among individuals with prostate or breast cancer.

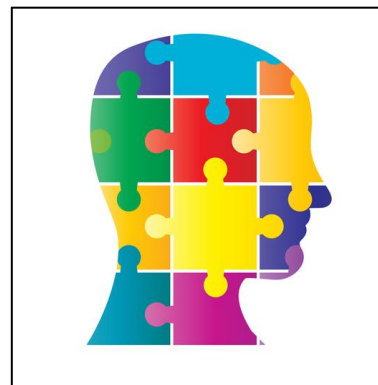

Data have been gathered to measure: QOL (physical, social, emotional, functional well-being), depression, anxiety, personality, emotional adjustment to cancer, illness-related stigma, and spiritual well-being; data gathered pre-, mid-, post-treatment.

Opportunities for medical students:

- Identify research questions and plan of analysis in existing dataset
- Conduct related literature reviews
- Data Analysis
- Prepare poster presentations and/or manuscript submissions

If interested, please:

- E-mail address below
- Include potential area(s) of interest out of the topics mentioned above
- Attach CV
